WINTER

WITHOUT VENTILATION, MOISTURE LADEN AIR RISES AND CONDENSES IN ROOF SPACE. DAMPNESS IS TRAPPED.

SUMMER

WITHOUT VENTILATION, HEAT FROM THE ROOF SPACE RADIATES INTO THE HOME AND CAN ALSO LIMIT THE EFFECTIVENESS OF INSULATION.

VENTILATION MAKES YOUR LIFE MORE COMFORTABLE

Ventilation is simply the process of replacing stale, hot air with clean, fresh air. This process makes your life more comfortable in three ways:

1. A more comfortable summer. Windmaster extracts super heated attic air enabling it to be replaced by fresh air through tiles or under eave vents. Roof space temperatures can be reduced from 60°C to 45°C, in turn, reducing the amount of heat radiating into the home.
2. Lower energy bills. Ducted air conditioning systems operate far more efficiently with roof space ventilation.
3. Less roof space moisture. Up to 12 litres of moisture per day is drawn into roof spaces from shower and kitchen fans. This can cause mould and mildew.

UNIQUE AUSTRALIAN DESIGN

Windmaster is a 300mm throat aluminium ventilator which has been specially designed for Australian conditions. Unique features and benefits include:

1. Dual bottom bearing system. Windmaster uses two precision steel bearings located in a patented bottom bearing assembly. This ensures smooth and quiet operation.
2. Replaceable bearings. Windmaster is the first domestic vent where the bearings can be easily replaced by the homeowner.
3. Dome reinforced against hail. The life of a ventilator can be lessened if the dynamic balance of the product is upset by hail damage. Windmaster has a special reinforced dome designed to provide extra resistance against hail.
4. Large range of colours. Windmaster is available in an extensive range of colours including – mill, brown, black,

homestead, heritage red, caulfield green, white, mist green, rivergum, beige and slate grey.

5. Withstands severe wind and rain. In independent laboratory tests, Windmaster withstood wind velocities of 180km/hr and satisfied the international Rain Dynamic Rain Penetration Test.

6. Lifetime Warranty. Edmonds offers a lifetime warranty on the body of the ventilator, for the original installation. A separate 10 year warranty is provided for the bearings but these are easily replaceable.

7. Fits all roof types. Windmaster's "Vari-Pitch" throat and malleable flashing suits all roof types with slopes from zero to 45°.

OTHER ACCESSORIES

Edmonds also makes available Under Eave Vents and Whirlybird Mate, an open and closeable ceiling register particularly suitable for cathedral ceilings. When used with Windmaster, both products can further improve overall ventilation benefits.
